EVOLIS

SIGNOSIGN/2

signoSign²

CREATE AND SIGN PDF DOCUMENTS FROM ANY APPLICATION

With ˝signoSign/2˝, create and sign PDF-documents with handwritten signature. The signatures are then incorporated into further electronic workflows without media discontinuity. Stop printing paper ˝just˝ for the signature. Lower your costs, speed up your processing-time and prevent fraudulent activities.

• Automated signing process thanks to templates easily created

• Manage your signed documents: send them by e-mail or archive them automatically.

• SignoSign/2 integrates seamlessly with Document Management System.

HIGHLIGHTS

Pre requisite:

• Windows® 2008 and 2012 Server, XP (SP3), Vista 32/64, W7 32/64, W8 32/64, W10 32/64

• Requires Microsoft .NET Framework 4.0 (internet automatic installation if required)

• Recommended Graphics resolution:
  - 1280 x 800 pixels
  - Minimal color depth: 16 bits

• Minimum memory: 2GB of RAM

P/N: L8500
Also available in bundles

Main features:

• Sign the document directly in the pad

• Support up to 2 pads simultaneously

• Each signature field can be assigned to a chosen pad

• Checking for mandatory and optional signatures

• Tab layout for displaying multiple documents

• Support Document Management System (compliant with market standards i.e.: XML index)

• Archive Plug-In Interface

• Customization and protection of the user interface

• Export and import configurations

• Acquire images from webcam or scanner (e.g. ID card) to the existing documents

Process automation:

• Signature positioning

• Display confirmation and text on the pad during the signature process

• Complete and save PDF forms

• Insert images into the document

• Save with individual file name

• Mail the signed document

• Forward signed document to an external application

• Index document

• Print

Security:

• Selection/Creation of an individual certificate (PKCS#12)

• Biometric data: stored within the document, encryption inside the pad
